Address: Binh Thanh, Ho Chi Minh City

SUMMARY

Backend Developer with hands-on experience in building RESTful APIs, authentication and authorization features, and database-driven backend services using Spring Boot and Node.js Express. Experienced in working with PostgreSQL, MongoDB, Redis, API integration, and backend business logic, with the ability to analyze requirements and turn business needs into practical software solutions.

EDUCATION

VNUHCM - University of Information Technology Sep 2023 - June 2027 expected
Information Technology - GPA: 8.18 / 10

WORK EXPERIENCE

HONEYNET Joint Stock Company | Backend Developer Intern June 2025 - Present
Project: Social Welfare Application - Published on App Store: apps.apple.com/vn/app/id6761987939
Tech Stack: Node.js (Express.js), TypeScript, PostgreSQL

- Built backend APIs for **authentication and account management**, improving the reliability of user onboarding and account recovery across registration, OTP verification, login, password setup, and password reset flows.
- Designed **PostgreSQL data models and backend logic** to support core social welfare features, enabling structured management of news/events, donation activities, activity search, and comment approval workflows
- Developed **real-time notification APIs** with robust request validation for successful application submissions.

PROJECT

DeepReader - AI-Powered Reading Platform | **Backend Developer**
Team Project - 6 members | Github: https://github.com/23520904/deepreader
Tech Stack: Spring Boot, PostgreSQL, MongoDB, Redis, Qdrant, Docker, Prometheus, Grafana

- Built a **RAG-powered PDF/EPUB reading backend** using Gemini embeddings and Qdrant/Haystack, supporting uploads up to **25MB** and generating grounded Q&A with citations, summaries, and up to **50 flashcards** per request.
- Designed an async ingestion pipeline that splits documents into **1,500-character chunks** with 200-character overlap, creates **768-dimensional embeddings** in **50-chunk batches**, and indexes them for vector search.
- Implemented **Prometheus/Grafana observability** across 4 microservices, monitoring request rate, 5xx error ratio, and **p95 latency** with 15-second scrape intervals and automated alerts for latency and error spikes.

Blockchain-Integrated E-commerce Platform | **Backend Developer**
Team Project - 5 members | Github: https://github.com/TamNgx179/blockchain-vehicle-marketplace
Tech Stack: Node.js (Express.js), Solidity, Ethers.js, Hardhat, MongoDB

- Built a **backend-driven vehicle purchase flow** covering JWT/OTP auth, saved MetaMask wallets, cart, checkout, order history, and admin order management, enabling a complete **4-step checkout** from cart selection to transaction confirmation.
- Integrated Express order services with a **Sepolia escrow smart contract** to sync deposit/full payment, seller confirmation, completion, and cancellation states between **on-chain transactions** and MongoDB order records.

SKILLS

Programming Languages: Java, JavaScript, TypeScript
Frameworks & Libraries: Spring Boot, Express.js
Databases & Cache: PostgreSQL, MongoDB, SQL Server, Redis
DevOps & Monitoring: Docker, Prometheus, Grafana
Tools: Git, GitHub, Postman, Figma, Flyway
Soft Skills: Problem Solving, Communication, Teamwork, Requirements Analysis

CERTIFICATES

IDP - IELTS 6.5 OVERALL May 2023
Google - Google AI Essentials Sep 2024
