Tam Nguyen Minh

Software Engineer | Backend, Full-Stack & AI Systems

Github: github.com/TamNgx179
Email: minhtam1792005@gmail.com
Phone: 0919222322
Address: Binh Thanh, Ho Chi Minh City

SUMMARY

Software Engineer with hands-on experience building full-stack and backend systems using Java, TypeScript, Spring Boot, NestJS, React, and Next.js. Experienced in developing responsive user-facing applications, RESTful APIs, asynchronous job processing, AI-assisted development workflows, and database-driven systems. Built AI-powered developer tooling and RAG-based applications, with a strong focus on software reliability, performance, automation, and user experience.

EDUCATION

VNUHCM - University of Information Technology Sep 2023 - Expected Jun 2027
Information Technology - GPA: 8.27 / 10

WORK EXPERIENCE

AlphaSphere | Fullstack Developer Intern Jul 2026 - Oct 2026
Tech Stack: TypeScript, NestJS, React, Vite, MongoDB, Redis, BullMQ, Docker, DigitalOcean Spaces

- Built an **AI-assisted coding harness** that provides structured project context, reusable tools, and development workflows to support consistent software implementation and engineering tasks.
- Developed an **asynchronous social-feed synchronization pipeline** for Instagram and X using Redis and BullMQ workers, processing updates in dedicated background jobs and delivering new content to digital signage screens without blocking the main application.
- Built **Stripe subscription billing** flows for plan changes, proration, trials, and usage-based charging, with **webhook-driven event handling** and **idempotency-key protection** to prevent duplicate operations and improve payment-state consistency.
- Designed a **secure media-storage workflow** using DigitalOcean Spaces, introducing a quarantine stage for newly uploaded files and **presigned URLs** for controlled asset access.

HONEYNET Joint Stock Company | Backend Developer Intern Jan 2026 - Jun 2026
Tech Stack: TypeScript, Node.js (Express.js), PostgreSQL

- Developed backend APIs for **authentication and account management**, covering registration, OTP verification, login, password setup, account recovery, and password reset workflows.
- Designed **PostgreSQL data models and backend services** for news/events, donation activities, activity search, and comment approval workflows.
- Built **real-time notification APIs** with robust request validation for application submission workflows, improving consistency and reliability of backend request handling.

PROJECT

DeepReader - AI-Powered Reading Platform | **Fullstack Developer**
Team Project - 6 members | Github: github.com/23520904/deepreader
Tech Stack: Java, Spring Boot, Next.js, Tailwind CSS, PostgreSQL, MongoDB, Redis, Qdrant, Docker

- Built a **RAG-powered PDF/EPUB learning workflow** using Gemini embeddings, Qdrant, and Haystack, supporting uploads up to **25MB**, citation-grounded Q&A, summaries, and generation of **1–50 flashcards**.
- Designed an **asynchronous ingestion pipeline** that splits documents into **1,500-character chunks** with **200-character overlap**, generates **768-dimensional embeddings** in **50-chunk batches**, and indexes them for vector search.
- Implemented **Redis-backed rate limiting** to protect AI inference and authentication endpoints, enforcing differentiated request quotas based on API workload.
- Optimized **Next.js page performance and SEO**, achieving **90+ Lighthouse scores** across mobile and desktop and reaching top-five Google Search results for selected target keywords.

SKILLS

Programming Languages: Java, TypeScript, JavaScript, HTML, CSS
Backend: Spring Boot, NestJS, Node.js, Express.js
Frontend: React, Next.js, Tailwind CSS
Databases & Data: PostgreSQL, MongoDB, SQL Server, Redis, Qdrant
Infrastructure & Storage: Docker, DigitalOcean Spaces
Tools: Git, GitHub, Postman, Figma

CERTIFICATES

IDP - IELTS Academic 6.5 May 2023
Google - Google AI Essentials Sep 2024
